

Summary

Crestron AirMedia is a single-user cable replacement add-on to Crestron room systems which are very expensive compared to Mersive Solstice, a comprehensive multi-user wireless collaboration platform that's affordable for every meeting space.

As Mersive's sole focus, Solstice offers industry-leading ease of use, performance, and user capabilities while Crestron AirMedia has low overall usability scores and primarily targets vendor lock-in. Mersive responds quickly to new market requirements that emerge by adding features and capabilities through software-based upgrades, whereas AirMedia offers no upgrade path.

Mersive Solstice Gen3 Pod Enterprise Unlimited

Crestron AirMedia 200/300
