

Summary

Zoom Rooms is a room-based video conferencing solution that supports remote connectivity via Zoom but lacks the flexibility to use many other conferencing services, as well as collaboration capabilities needed to drive real efficiency and productivity gains. Solstice Conference is a new class of room system that leverages user laptops to deliver a unified, touchless collaboration experience among onsite and remote participants. With Solstice Conference, users have the flexibility to integrate with their existing Zoom account or conferencing service of choice. And due to its smarter system architecture, Solstice Conference reduces hidden costs that are otherwise experienced with Zoom Rooms, such as external bandwidth consumption, vendor lock-in, and training/support time.

Zoom Rooms
