## Introducing the Digital Signage Feature

The 3.4 version of Solstice extends the ability to play HTML-based signage content on Solstice displays when they are not in active use for wireless collaboration. The powerful add-on feature brings signage playback to huddle rooms, transition spaces, and other spaces that lack the budget for dedicated digital signage deployments.

Solstice 3.4 Features and Capabilities

- HTML5 digital signage playback
- Support for feeds with HD video
- Web-based Solstice welcome screens
- iOS YouTube App Streaming

- **Required:** Digital Signage requires Enterprise Edition license (Solstice Pods only)
- **Not included:** Signage content creation or management solutions
